

**7 June 2019**

**Forth and Tay Site Visit - MVV Environment Baldovie Ltd, Dundee**

IOSH Forth and Tay had their site visit to MVV Environment Baldovie Ltd in Dundee. The site is an energy from waste plant processing up to 100,000 tons of residue waste per annum and is contracted with Dundee City and Angus council for all the local areas municipal waste. The has had many challenges in it 20 years in operation with an aging site and demographic workforce. MVV Environment Ltd took over in November 2017 and has made significant investment in maintenance and repair, not to mention the construction of a new 125 million pound plant next door to manage the waste contract for the next 25 to 30 years. Significant improvements has also been made to the safety arrangements on site with a number of improvements that were highlighted during the site tour. The site tour was very informant and very well received with a number of questions asked during and after the tour with attendees in amazement seeing how their black bin waste is processed and used to create renewable energy. This has been a very successful tour with a view to arranging another tour of the new facility in 2021.

Mit freundlichen Grüßen.
