Work Streams

The expanded CLC has twelve workstreams that operate collaboratively to address the biggest issues facing the sector, focused on the Industry Recovery Plan.

Four sector workstreams are tasked with developing specific solutions to challenges facing particular parts of the industry such as the Repair and Maintenance Sector. Sector workstreams bring together clients and the supply chain to address the priorities identified by the sector.

Eight industry-wide workstreams are tasked with addressing national priorities including skills, net zero carbon and building safety. These workstreams bring together experts from across the industry to address specific issues that are best delivered through the coordinated workstreams of the CLC.
